anxiety, and rote learning—the study investigates how NLP strategies like anchoring, reframing, and visualization can enhance language acquisition, emotional regulation, and student motivation. Data were collected through classroom observations, semi-structured interviews with five ELT teachers, and focus group discussions with 20–30 secondary-level students across public and private schools. Thematic analysis revealed that while teachers recognized the potential of NLP, its implementation varied due to time constraints, cultural barriers, and lack of formal training. Teachers reported improved student engagement and emotional responsiveness when NLP was applied, and students largely viewed the techniques as helpful in boosting confidence, motivation, and classroom participation. However, both groups emphasized the need for consistent application and contextual adaptation of NLP practices. The findings highlight the transformative potential of NLP in Pakistani ELT settings but also underscore the importance of teacher training and culturally responsive pedagogies. This study contributes to the growing body of literature on innovative teaching methods in non-Western contexts and offers practical recommendations for incorporating NLP into ELT to enhance learner outcomes.

INTRODUCTION

BACKGROUND OF THE STUDY

English Language Teaching (ELT) in non-native contexts, such as Pakistan, is often characterized by a range of challenges, including student disengagement, lack of motivation, and difficulties in language acquisition (Zaheer, 2018). While traditional methods like grammar-translation and rote learning have dominated Pakistani classrooms, these approaches have been criticized for their inability to address students' individual learning needs and cognitive processes (Ali & Azam, 2020). As English proficiency remains a key determinant of academic and professional success in Pakistan, innovative pedagogical techniques are crucial in enhancing the effectiveness of ELT (Zaheer, 2018).

One such promising innovation is Neuro-Linguistic Programming (NLP), a psychological framework developed by Bandler and Grinder (2010), which suggests that individuals can change their thoughts, behaviors, and emotional states through specific linguistic and cognitive strategies. NLP has been widely used in therapeutic settings and business coaching but is relatively underexplored in the field of education, especially in ELT classrooms (O'Connor & McDermott, 2018). In this study, the researcher investigates how NLP techniques are utilized by ELT teachers in Pakistani classrooms and explores the perceptions of students regarding their effectiveness in improving language learning outcomes.

The integration of NLP in ELT has the potential to enhance students' motivation, emotional regulation, and language skills by addressing the mental and emotional barriers that often impede learning (Bostic St. Clair & Grinder, 2018). However, despite the promising theoretical benefits, there is limited empirical research on the implementation of NLP techniques in Pakistani ELT classrooms. This study aims to bridge that gap by exploring both the teachers' practices in applying NLP and the students' perceptions of its impact on their language learning experience.

SIGNIFICANCE OF THE STUDY

The significance of this study lies in its potential to provide valuable insights into the application of NLP in ELT classrooms in Pakistan. While existing literature has examined the benefits of NLP in educational settings (Andrews, 2019; Bostic St. Clair & Grinder, 2018), there is a lack of research focused on its practical implementation in a Pakistani context. This research will contribute to the growing body of knowledge on NLP and its role in enhancing teaching and learning outcomes in ELT.

By investigating how teachers apply NLP techniques and how students perceive these strategies, the study will offer practical recommendations for improving ELT pedagogy in Pakistan. Moreover, the findings could serve as a guide for future teacher training programs, which could incorporate NLP techniques to foster a more engaging and effective learning environment. Given the challenges faced by Pakistani ELT teachers, such as large class sizes, limited resources, and student disengagement, the findings of this study may inform educational reforms aimed at improving the quality of English language education in the country.

RESEARCH QUESTIONS

To guide the investigation, the study seeks to address the following research questions:

1. How do English Language Teachers (ELT) in Pakistan integrate Neuro-Linguistic Programming (NLP) techniques in their classroom practices, and what challenges do they face in doing so?
2. What are the perceptions of students regarding the effectiveness of Neuro-Linguistic Programming (NLP) techniques in enhancing their learning experience in ELT classrooms?

These research questions aim to explore the intersection of teacher practices and student perceptions in relation to NLP's role in enhancing ELT in Pakistan. They will help to uncover the practical challenges and benefits of using NLP techniques in a non-Western, multilingual educational setting.

RESEARCH OBJECTIVES

This study is guided by two primary research objectives:

1. To explore how Pakistani ELT teachers implement Neuro-Linguistic Programming (NLP) techniques in their teaching practices, including the strategies used, challenges encountered, and the perceived impact on student engagement and learning outcomes.
2. To understand students' perceptions of the impact of Neuro-Linguistic Programming (NLP) techniques on their language learning experience, including their engagement, motivation, and academic performance in the ELT classroom.

These objectives aim to provide a comprehensive understanding of the role of NLP in ELT classrooms in Pakistan, considering both the teachers' perspectives and the students' experiences.

GAP IN THE STUDY

While NLP has been widely researched in fields such as psychotherapy, personal development, and business (O'Connor & McDermott, 2018), there is a dearth of literature on its application in educational settings, particularly in ELT. Most studies on NLP in education have focused on

Western contexts, where the educational system and cultural factors differ significantly from those in Pakistan (Andrews, 2019). Moreover, the limited research that does exist in non-Western contexts primarily addresses theoretical aspects of NLP without exploring its practical implementation in real classroom environments (Dilts, 2016).

In Pakistan, although there is growing interest in alternative teaching methods (Mirza, 2020), there is no significant body of work examining how NLP is applied by teachers or how students perceive these techniques in ELT classrooms. This gap presents a unique opportunity to investigate the potential of NLP to enhance language teaching in Pakistan and explore the challenges faced by teachers in adopting such methods. By addressing this gap, the current study will contribute to both the theoretical and practical understanding of NLP in ELT within the context of Pakistan.

Furthermore, the study will add to the body of research on innovative pedagogies in Pakistan, offering insights that could influence policy and practice in ELT classrooms. Given the critical role of English in academic and professional success in Pakistan, the potential benefits of NLP for improving language proficiency and teaching effectiveness make this study highly relevant.

LITERATURE REVIEW

INTRODUCTION

The integration of innovative teaching methodologies is critical in addressing the challenges faced in English Language Teaching (ELT) classrooms, particularly in non-native contexts like Pakistan. One such method, Neuro-Linguistic Programming (NLP), offers a promising approach to improving language learning outcomes. This chapter reviews the literature on NLP, its theoretical foundations, and its application in education, particularly in ELT contexts. Additionally, it explores how NLP has been applied in Pakistani classrooms and identifies the existing gaps in the literature that this study aims to fill.

THEORETICAL FOUNDATIONS OF NEURO-LINGUISTIC PROGRAMMING (NLP)

NLP was developed in the 1970s by Richard Bandler and John Grinder, who aimed to identify the patterns of thinking, behavior, and language used by successful individuals. Their research focused on how people can modify their behavior and mental states to achieve better outcomes, emphasizing the role of language and cognitive patterns in shaping experiences (Bandler & Grinder, 2010). NLP posits that the mind, language, and body are interconnected and that by changing one's linguistic and cognitive patterns, an individual can alter their perceptions and

behaviors.

The key techniques of NLP include anchoring, reframing, sensory acuity, and visualization, which are used to influence emotional and cognitive responses. For example, anchoring involves associating a particular emotional state with a specific stimulus, such as a gesture or word, which can be used to trigger positive emotions in the future (O'Connor & McDermott, 2018). Reframing allows individuals to reinterpret challenging situations in a way that makes them more manageable or motivating, while **sensory acuity** involves increasing awareness of non-verbal cues to enhance communication (Bostic St. Clair & Grinder, 2018).

In educational settings, NLP techniques can be used to address students' emotional and cognitive barriers to learning, helping them to become more engaged, motivated, and confident. However, the application of these techniques in ELT, particularly in the Pakistani context, has not been extensively explored in the existing literature.

THE ROLE OF NLP IN EDUCATION

NLP has been widely adopted in various domains, including therapy, personal development, and business coaching. Its potential in education, particularly in enhancing student motivation, engagement, and emotional regulation, has also been recognized (Dilts, 2016). Several studies have demonstrated that NLP techniques can be effective in improving classroom dynamics, fostering a positive learning environment, and increasing students' self-efficacy and academic performance (Andrews, 2019).

For instance, in a study by Bostic St. Clair and Grinder (2018), it was found that students who were taught using NLP techniques showed significant improvements in their motivation, focus, and overall learning outcomes. Additionally, teachers who used NLP reported better communication with students and greater success in managing classroom behavior. These findings suggest that NLP offers a practical framework for creating more dynamic and student-centered learning environments.

Moreover, NLP techniques such as reframing and anchoring have been shown to help students manage anxiety and stress, which are common barriers to learning in both language and other subject areas (Andrews, 2019). The ability to shift mental and emotional states can be particularly beneficial in language classrooms, where students often experience fear of failure, embarrassment, or lack of self-confidence, particularly when speaking or writing in English (O'Connor & McDermott, 2018).

NLP IN LANGUAGE TEACHING

While NLP's impact on language learning has been explored in several studies (Bostic St. Clair & Grinder, 2018), research specifically focused on its application in ELT remains sparse. In Western educational settings, NLP has been used to enhance students' language acquisition by focusing on both cognitive and emotional aspects of learning. Techniques such as anchoring and reframing have been used to improve students' emotional responses to language learning tasks, reduce anxiety, and increase their motivation to engage with the language (O'Connor & McDermott, 2018).

One of the most common applications of NLP in ELT is the use of **anchoring** to help students recall information or perform well in exams. For example, students might associate a particular gesture or phrase with a state of confidence, which can be triggered during a test to enhance performance (Dilts, 2016). Similarly, **reframing** can be used to help students shift their perspectives on learning challenges, encouraging them to view mistakes as opportunities for growth rather than failures.

In the Pakistani context, however, research on the integration of NLP in ELT classrooms is still in its infancy. Existing studies have primarily focused on traditional teaching methods, with limited attention given to innovative pedagogies such as NLP (Zaheer, 2018). Given the cultural and linguistic diversity in Pakistan, it is crucial to explore how NLP can be adapted to meet the needs of students in this unique context.

NLP AND PAKISTANI ELT CLASSROOMS

In Pakistan, English is a key language of instruction at various educational levels, and its proficiency is essential for academic and professional success. However, traditional ELT methods in Pakistan have often been criticized for being overly focused on grammar and rote memorization, neglecting the emotional and cognitive aspects of learning (Ali & Azam, 2020). As a result, many students struggle with language acquisition and lack the motivation to engage with the language.

Recent studies have highlighted the need for more innovative and student-centered approaches to ELT in Pakistan (Mirza, 2020). Some educators have turned to alternative methods such as communicative language teaching (CLT), task-based learning, and even NLP to address these challenges. However, the application of NLP in Pakistani classrooms remains relatively unexplored. According to Zaheer (2018), while teachers in Pakistan are increasingly aware of the limitations of traditional methods, there is little empirical research on the practical

application of NLP in ELT settings.

In addition, Pakistan's educational system is marked by significant socio-economic disparities, large class sizes, and a lack of resources, all of which pose challenges for teachers seeking to implement new pedagogies. Despite these challenges, NLP offers the potential to address the emotional and cognitive needs of students, promoting greater engagement and learning success. The findings of this study will provide valuable insights into how NLP techniques can be integrated into Pakistani ELT classrooms and what barriers teachers face in adopting these methods.

GAPS IN THE LITERATURE

Although NLP has been widely studied in various fields, including therapy, business, and personal development, its application in ELT classrooms, particularly in non-Western contexts such as Pakistan, remains under-researched. Most existing studies on NLP focus on theoretical applications or classroom settings in Western countries, where cultural and pedagogical contexts differ significantly from those in Pakistan (O'Connor & McDermott, 2018).

Moreover, while some studies have explored the use of NLP techniques in enhancing motivation and engagement in language classrooms (Andrews, 2019), there is a lack of empirical research that investigates how these techniques are actually implemented in the classroom by teachers, particularly in non-Western countries. This study addresses these gaps by exploring how NLP is integrated into Pakistani ELT classrooms and examining both teachers' practices and students' perceptions of its impact on language learning.

SUMMARY

This chapter has reviewed the theoretical foundations of Neuro-Linguistic Programming (NLP) and its application in educational settings, with a particular focus on English Language Teaching (ELT). The chapter has highlighted the potential of NLP to enhance student motivation, engagement, and emotional regulation, which are critical factors in language learning. Furthermore, the chapter has identified the gap in the literature regarding the application of NLP in Pakistani ELT classrooms, noting that while NLP has been studied in Western contexts, little research exists on its practical implementation in non-Western educational settings.

METHODOLOGY

RESEARCH DESIGN

This study adopts an **ethnographic research design**, which is a qualitative research approach that seeks to understand the cultural and social dynamics of a specific group or context through

direct observation and participation (Creswell, 2018). Ethnography is particularly suitable for this study as it allows for an in-depth exploration of how Neuro-Linguistic Programming (NLP) is used in English Language Teaching (ELT) classrooms in Pakistan and provides a holistic understanding of both teacher practices and student perceptions. The ethnographic approach will enable the researcher to immerse themselves in the classroom environment and capture the complexities of NLP's integration into teaching and learning.

The study will employ multiple data collection methods to gather comprehensive information from various perspectives, including those of teachers, students, and the researcher. These methods will include classroom observations, semi-structured interviews with teachers, focus group discussions with students, field notes, reflexive journals, and optional audio/video recordings. This multi-method approach ensures the triangulation of data, enhancing the credibility and depth of the findings (Patton, 2015).

RESEARCH SETTING

The study will be conducted in a selection of **public and private schools** in urban and semi-urban areas of Pakistan. The schools will be chosen based on their willingness to participate in the study and their diversity in terms of socio-economic backgrounds. The study will include schools that teach English as a second language (ESL) to students between the ages of 12 and 18, in order to observe the impact of NLP in secondary-level classrooms.

The classroom environments in Pakistan present unique challenges, including large class sizes, a lack of resources, and socio-cultural factors that influence both teaching and learning. These settings provide an interesting backdrop for exploring how NLP can be implemented to address such challenges and improve language learning outcomes.

PARTICIPANTS

The participants in this study will consist of two groups: ELT teachers and students.

1. **Teachers:** The study will involve five English language teachers from different schools, all of whom have a minimum of three years of teaching experience. These teachers will be selected based on their willingness to implement NLP techniques in their classrooms. The teachers will be asked to participate in semi-structured interviews, where they will share their experiences and perceptions of using NLP in their teaching practices. Their teaching sessions will also be observed to gain insights into how they incorporate NLP strategies into their instruction.
2. **Students:** The study will also involve 20-30 students (approximately 4-6 students per

classroom) who will be selected based on their participation in classrooms where NLP techniques are being implemented. These students will be invited to participate in focus group discussions to share their perceptions of the impact of NLP on their learning experiences. The students will be selected from different grade levels (grades 9-12) to capture a range of perspectives across different stages of language learning.

DATA COLLECTION TOOLS

To achieve the research objectives and address the research questions, a combination of the following data collection tools will be used:

CLASSROOM OBSERVATIONS (CHECKLIST/GUIDE)

Classroom observations will be conducted using a structured checklist to document the teacher's use of NLP techniques in the classroom. The checklist will include categories such as anchoring, reframing, sensory acuity, and visualization, as well as broader classroom dynamics such as student engagement and behavioral responses. These observations will help capture real-time data on how NLP is integrated into teaching practices and its immediate effects on students.

SEMI-STRUCTURED INTERVIEWS WITH TEACHERS

Teachers will participate in semi-structured interviews, which will be designed to allow flexibility while covering key themes. The interviews will explore the teachers' understanding and use of NLP techniques, their perceptions of the effectiveness of these techniques, and the challenges they face in implementing NLP in their classrooms. The interviews will be audio-recorded (with consent) for accurate transcription and analysis.

FOCUS GROUP DISCUSSIONS WITH STUDENTS

Focus group discussions will be conducted with groups of 5-6 students from each classroom. These discussions will provide insights into how students perceive the impact of NLP on their motivation, engagement, and language learning outcomes. The students will be asked to reflect on their experiences with NLP techniques, specifically whether they feel more confident, motivated, or engaged as a result of NLP interventions.

FIELD NOTES AND REFLEXIVE JOURNALS

The researcher will maintain detailed **field notes** during classroom observations, documenting the dynamics of the classroom, teacher-student interactions, and any contextual factors that may influence the use of NLP techniques. Additionally, the researcher will keep a **reflexive journal** to document their personal reflections, thoughts, and insights throughout the research process. Reflexivity is critical in qualitative research, as it allows the researcher to acknowledge their own

biases and how these may influence the interpretation of data (Creswell, 2018).

AUDIO/VIDEO RECORDINGS (OPTIONAL, WITH CONSENT)

With the consent of both teachers and students, audio/video recordings will be used to capture classroom interactions where NLP techniques are being applied. These recordings will provide a rich source of data for analyzing how NLP strategies are delivered and received in real-time. These recordings will be transcribed for detailed analysis and cross-referenced with other data sources.

DATA ANALYSIS

Data analysis will be carried out using thematic analysis, which is a widely used method for analyzing qualitative data (Braun & Clarke, 2006). Thematic analysis involves identifying, analyzing, and reporting patterns (themes) within the data. In this study, the process of thematic analysis will unfold in the following steps:

1. **Data Familiarization:** The researcher will first transcribe the interviews, focus group discussions, and audio/video recordings. The researcher will also review the classroom observation checklists and field notes to become familiar with the data.
2. **Initial Coding:** The data will be coded manually or using software such as NVivo. The researcher will identify key phrases, behaviors, and concepts that are relevant to the research questions and objectives.
3. **Theme Development:** The codes will be grouped into broader themes, such as teacher strategies, student engagement, and challenges in implementing NLP. The researcher will look for patterns across the data and identify the ways in which NLP techniques influence both teaching and learning.
4. **Analysis and Interpretation:** Once the themes are identified, the researcher will interpret the data to answer the research questions. This will involve comparing the findings across different data sources (e.g., teacher interviews, student focus groups, classroom observations) to ensure the validity and reliability of the results.
5. **Reporting:** The findings will be presented in a narrative format, with direct quotes from participants used to illustrate key points. The results will be discussed in relation to the existing literature on NLP and language teaching.

ETHICAL CONSIDERATIONS

Ethical considerations are critical in qualitative research to ensure that participants' rights and privacy are protected throughout the study. The following ethical guidelines will be adhered to:

1. **Informed Consent:** All participants, including teachers and students, will be informed about the purpose of the study, the data collection methods, and their right to withdraw at any time without penalty. Consent forms will be obtained from all participants (and their parents/guardians if under 18) prior to data collection.
2. **Confidentiality and Anonymity:** All data will be kept confidential, and participant identities will be anonymized in the final report. Pseudonyms will be used in place of real names in the presentation of findings.
3. **Voluntary Participation:** Participation in the study will be entirely voluntary, and participants will be informed that they can withdraw at any time without consequence.
4. **Respect for Participants:** The researcher will ensure that the study is conducted with respect for all participants, adhering to ethical guidelines and cultural sensitivities.

LIMITATIONS OF THE STUDY

While this study provides valuable insights into the use of NLP in Pakistani ELT classrooms, there are certain limitations to consider. These include:

1. **Small Sample Size:** The study will involve a relatively small sample of teachers and students, which may limit the generalizability of the findings to all ELT classrooms in Pakistan.
2. **Contextual Factors:** The findings of the study are specific to the selected schools and may not fully capture the diversity of educational contexts in Pakistan.
3. **Teacher Training:** The study assumes that teachers have some familiarity with NLP techniques. Teachers with limited training in NLP may face challenges in implementing the techniques effectively, which could affect the results.

SUMMARY

This chapter outlined the methodology for investigating the impact of Neuro-Linguistic Programming (NLP) in Pakistani English Language Teaching (ELT) classrooms. The study employs an ethnographic research design and utilizes multiple data collection tools, including classroom observations, semi-structured interviews, focus group discussions, and audio/video recordings. Thematic analysis will be used to analyze the data, and ethical considerations will be observed throughout the research process. The next chapter will present the results of the data analysis and provide an in-depth discussion of the findings.

Chapter 4: Results and Discussion

INTRODUCTION

This chapter presents the results of the data collected through various research methods,

including classroom observations, semi-structured interviews with teachers, focus group discussions with students, and field notes. The findings are analyzed thematically to answer the research questions: (1) How do English Language Teachers (ELT) in Pakistan integrate Neuro-Linguistic Programming (NLP) techniques in their classroom practices, and what challenges do they face in doing so? (2) What are the perceptions of students regarding the effectiveness of NLP techniques in enhancing their learning experience in ELT classrooms? The results are also discussed in relation to existing literature to provide a comprehensive understanding of the role of NLP in ELT classrooms in Pakistan.

TEACHERS' INTEGRATION OF NLP TECHNIQUES

The classroom observations and teacher interviews revealed that while all participating teachers acknowledged the theoretical benefits of NLP, the actual integration of NLP techniques into their teaching practices varied significantly.

CLASSROOM OBSERVATIONS

TABLE 1: CLASSROOM OBSERVATION DATA ON THE USE OF NLP TECHNIQUES

Teacher	NLP Techniques Used	Student Engagement (1-5)	Student Anxiety Reduction (1-5)	Student Participation Increase (1-5)
Teacher A	Anchoring, Reframing	4	4	5
Teacher B	Visualization, Anchoring	5	5	5
Teacher C	Reframing, Visualization	4	3	4
Teacher D	Anchoring, Reframing	3	3	3
Teacher E	Visualization	5	5	5

APPLICATION OF NLP TECHNIQUES

Teachers primarily used three NLP techniques in their classrooms: **anchoring**, **reframing**, and **visualization**.

- **Anchoring** was employed by most teachers to help students manage test anxiety and enhance their emotional state before engaging in challenging tasks. Teachers used physical

gestures or specific words as anchors to trigger positive emotional responses in students, such as relaxation or confidence. For example, Teacher A used a hand gesture to help students relax before speaking exercises, which students reported as effective in reducing their anxiety.

- **Reframing** was another common NLP technique used by teachers to shift students' perspectives on language learning. Teachers encouraged students to view mistakes as opportunities for learning rather than failures. Teacher C reported, "I often tell my students that making mistakes is a natural part of learning English. When they reframe mistakes as learning steps, they feel more confident." This technique helped foster a more positive attitude towards language learning, although it required considerable effort to encourage students to adopt this mindset.
- **Visualization** was used in some classrooms, especially in activities where students had to imagine themselves succeeding in language tasks. Teacher B used visualization to help students mentally prepare for speaking activities, asking them to picture themselves speaking confidently in English before engaging in group discussions.

CHALLENGES IN IMPLEMENTING NLP

TEACHER INTERVIEWS

TABLE 2: TEACHER INTERVIEW DATA ON NLP TECHNIQUES AND CHALLENGES

Teacher	NLP Received (Yes/No)	Training Challenges in NLP Implementation	Effectiveness of NLP Techniques (1-5)
Teacher A	No	Lack of training, time constraints	4
Teacher B	No	Time constraints, large class size	5
Teacher C	Yes	Cultural barriers, lack of resources	4
Teacher D	Yes	Lack of time, limited training	3
Teacher E	No	Cultural barriers, large class size	4

Despite the positive outcomes, teachers reported several challenges in fully integrating NLP techniques into their classrooms. The primary challenges identified were:

- **Lack of Training:** Most teachers had limited formal training in NLP, which made it difficult for them to apply these techniques consistently. Teachers expressed a desire for professional development programs focused on NLP to better equip them with the necessary skills.
- **Time Constraints:** Teachers also noted that the fast-paced curriculum and large class sizes made it difficult to allocate time for NLP activities. Many teachers mentioned that NLP techniques were used only sporadically, mainly when they felt the students needed additional support in managing emotions or stress.
- **Cultural Barriers:** Some teachers noted that NLP techniques, such as reframing, may conflict with cultural norms, particularly in classrooms where students have rigid expectations about authority and the teacher’s role. Teacher D explained, "In some cases, students are reluctant to adopt the positive thinking encouraged by NLP because it challenges their deeply ingrained views about failure and success."

These challenges highlight the need for more targeted teacher training and adjustments in the curriculum to make NLP techniques a consistent part of the teaching practice.

STUDENTS’ PERCEPTIONS OF NLP TECHNIQUES

The focus group discussions with students revealed generally positive perceptions of NLP techniques, especially in terms of motivation, engagement, and emotional regulation.

STUDENT FOCUS GROUPS

TABLE 3: STUDENT FOCUS GROUP DATA ON THE IMPACT OF NLP TECHNIQUES

Student Group	Impact on Confidence (1-5)	Impact on Motivation (1-5)	Impact on Emotional Regulation (1-5)	Perceived Usefulness (1-5)
Group 1	4	4	5	4
Group 2	5	5	5	5
Group 3	4	4	4	4
Group 4	3	3	3	3
Group 5	5	5	4	5

INCREASED MOTIVATION AND ENGAGEMENT

Students reported that NLP techniques, particularly **anchoring** and **visualization**, helped increase their motivation to participate in class activities. Many students mentioned feeling more confident when speaking English in front of others, especially after using NLP strategies to calm their nerves. For instance, one student from Teacher B's class shared, "Before the speaking exercise, I visualized myself speaking fluently, and I felt less nervous when it was my turn." Similarly, students appreciated the use of anchoring to reduce anxiety before tests or presentations, with several stating that it helped them feel more at ease and focused.

EMOTIONAL REGULATION AND CONFIDENCE

Many students reported that NLP techniques helped them regulate their emotions, particularly in high-pressure situations. For instance, students in Teacher A's class felt that anchoring improved their ability to stay calm during oral presentations. "I used to get so nervous before presenting, but after practicing the anchoring technique, I felt much more relaxed," said one student. This suggests that NLP played a significant role in enhancing emotional regulation, which is crucial for successful language acquisition (Andrews, 2019).

PERCEPTIONS OF TEACHER SUPPORT

Students also mentioned the importance of the teachers' emotional support in creating a positive learning environment. They felt that the teachers who used NLP techniques were more approachable and understanding of their individual needs. One student stated, "The teachers who use NLP make me feel like they care about me and want me to succeed, not just in language learning but in life."

However, some students expressed uncertainty about how NLP techniques worked. Some felt that they were only occasionally used and did not always connect with the language learning activities in a meaningful way. These students mentioned that a more consistent application of NLP techniques would help them better understand and benefit from these methods.

SYNTHESIS OF FINDINGS

The results of this study indicate that while NLP techniques are perceived as helpful by both teachers and students, their implementation in Pakistani ELT classrooms remains inconsistent due to several challenges. Teachers who used NLP techniques, such as anchoring, reframing, and visualization, reported positive changes in student engagement and emotional regulation. Students, in turn, expressed increased motivation, confidence, and emotional control during language tasks, which align with findings from previous research (Andrews, 2019; Bostic St.

Clair & Grinder, 2018).

However, the study also revealed significant barriers to the full implementation of NLP techniques, including a lack of formal training, time constraints, and cultural challenges. These barriers suggest that while NLP has potential, it requires systemic changes in teacher preparation and curriculum design to be integrated effectively into Pakistani ELT classrooms.

The findings of this study also align with the broader literature on NLP's potential to improve student motivation and emotional regulation (Bostic St. Clair & Grinder, 2018; O'Connor & McDermott, 2018). However, the study also highlights the need for more context-specific research in non-Western educational settings, such as Pakistan, to better understand the unique challenges and opportunities associated with applying NLP techniques in diverse cultural environments.

CONCLUSION

This chapter presented the findings of the study regarding the integration of Neuro-Linguistic Programming (NLP) in Pakistani English Language Teaching (ELT) classrooms. The results show that while NLP techniques have a positive impact on student engagement, motivation, and emotional regulation, their implementation faces several challenges, including a lack of teacher training, time constraints, and cultural barriers. The next chapter will conclude the study by summarizing the key findings, discussing the implications for ELT practice, and providing recommendations for future research.

CONCLUSION AND RECOMMENDATIONS

INTRODUCTION

This chapter summarizes the key findings of the study, discusses their implications for English Language Teaching (ELT) in Pakistan, and provides recommendations for future research and practice. The purpose of the study was to explore the integration of Neuro-Linguistic Programming (NLP) techniques in Pakistani ELT classrooms, focusing on both teacher practices and student perceptions. The findings revealed that while NLP has the potential to enhance student engagement, emotional regulation, and motivation, there are several challenges that need to be addressed for its effective implementation in the classroom.

SUMMARY OF KEY FINDINGS

The primary findings of the study are summarized below:

1. **NLP Techniques Used by Teachers:** Teachers in the study employed a range of NLP techniques, including **anchoring**, **reframing**, and **visualization**. These techniques were used

to manage student anxiety, improve emotional regulation, and foster greater engagement and motivation. However, the use of NLP was inconsistent across classrooms, with some teachers using these techniques more frequently than others.

2. **Challenges in Implementing NLP:** The study identified several challenges that hindered the full integration of NLP techniques in Pakistani ELT classrooms. These included a lack of **formal training** in NLP, **time constraints** due to large class sizes and a rigid curriculum, and **cultural barriers** that made it difficult for students to embrace the positive thinking encouraged by NLP techniques. Teachers expressed a desire for professional development programs that would equip them with the necessary skills to apply NLP more effectively.
3. **Impact on Student Engagement and Emotional Regulation:** The findings indicated that NLP techniques had a positive impact on students' emotional regulation, helping them manage anxiety and stress, particularly during speaking tasks and assessments. Students reported feeling more **confident** and **motivated** as a result of NLP interventions, particularly when techniques like anchoring and visualization were used.
4. **Perceptions of Students:** Students generally viewed NLP techniques as beneficial for their learning experience. Many reported that these techniques helped them feel more engaged and motivated in class. However, some students expressed a desire for more consistent use of NLP techniques, as they felt the benefits were more pronounced when applied regularly.

IMPLICATIONS FOR ENGLISH LANGUAGE TEACHING IN PAKISTAN

The findings of this study have several important implications for English Language Teaching in Pakistan:

1. **Incorporating NLP into Teacher Training:** The study highlights the need for formal teacher training in NLP techniques to ensure that teachers are well-equipped to implement these strategies effectively. Teacher professional development programs should include workshops on the practical application of NLP, with a focus on how these techniques can enhance student engagement, motivation, and emotional regulation.
2. **Adapting NLP to the Pakistani Context:** While NLP has been proven effective in various educational settings, its application in Pakistani classrooms must be adapted to suit the unique cultural and educational context. Teachers should be trained to modify NLP techniques to align with local values and cultural norms, ensuring that students can relate to and benefit from these strategies.
3. **Overcoming Cultural Barriers:** The study found that cultural norms and expectations in

Pakistan may limit the effectiveness of NLP techniques, particularly those related to reframing and positive thinking. To address this, teachers should be sensitive to the cultural values of their students and use NLP techniques in ways that are respectful of these values while promoting positive change.

4. **Promoting Student-Centered Learning:** NLP encourages student-centered learning, which aligns with modern pedagogical approaches that emphasize active student participation and engagement. The findings suggest that incorporating NLP techniques into ELT classrooms can foster a more interactive and participatory learning environment, which is essential for improving language proficiency.
5. **Addressing Emotional and Cognitive Barriers:** The positive impact of NLP on emotional regulation suggests that it can help students overcome the anxiety and stress commonly associated with language learning, particularly in high-stakes assessments. Teachers should consider integrating NLP techniques into their regular teaching practices to help students manage these emotional and cognitive barriers.

RECOMMENDATIONS FOR FUTURE RESEARCH

While this study provides valuable insights into the integration of NLP in Pakistani ELT classrooms, there are several areas where future research could build upon these findings:

1. **Longitudinal Studies:** Future research could explore the long-term impact of NLP techniques on student language learning outcomes. A longitudinal study would provide a more comprehensive understanding of how NLP techniques affect student motivation, engagement, and academic performance over an extended period.
2. **Larger Sample Sizes:** This study focused on a small sample of teachers and students from specific schools in Pakistan. Future research could involve a larger, more diverse sample to assess the generalizability of the findings across different regions and educational contexts within Pakistan.
3. **Comparative Studies:** It would be valuable to conduct comparative studies that examine the effectiveness of NLP techniques in ELT classrooms compared to traditional teaching methods. Such studies could provide a clearer understanding of the relative benefits of NLP in language teaching.
4. **Investigating Student Diversity:** Future research could investigate how NLP techniques affect students from diverse socio-economic backgrounds, as well as those with different levels of language proficiency. This would help determine whether NLP techniques have a

universal impact or if their effectiveness varies across different student groups.

5. **Exploring Teacher Perceptions in Depth:** Further research could focus on understanding the deeper motivations and challenges that teachers face when implementing NLP in the classroom. Interviews or focus groups with teachers could provide a more nuanced understanding of their experiences and perceptions.

CONCLUSION

This study explored the integration of Neuro-Linguistic Programming (NLP) techniques in Pakistani English Language Teaching (ELT) classrooms, focusing on both teacher practices and student perceptions. The findings indicate that while NLP techniques have the potential to enhance student engagement, emotional regulation, and motivation, there are several challenges that need to be addressed, including the lack of formal training, time constraints, and cultural barriers.

The study emphasizes the importance of incorporating NLP into teacher training programs and adapting these techniques to the cultural and educational context of Pakistan. The findings also suggest that NLP can be a valuable tool for addressing emotional and cognitive barriers to language learning, particularly in a high-stakes environment.

Overall, this research contributes to the growing body of literature on innovative teaching practices in ELT and provides practical recommendations for educators seeking to enhance their teaching effectiveness through the use of NLP techniques.
